| SUMMARY    | I build the production backbone around data and AI-heavy products — distributed backends, performance at scale, and the data/retrieval pipelines that sit underneath the model.                                                                                                                                                                                                                                                                                     |                       |
| EXPERIENCE | <b><u>Ninox Software GmbH — Berlin</u></b><br>Senior Software Engineer                                                                                                                                                                                                                                                                                                                                                                                              | Nov '22 – Feb '26     |
|            | <ul style="list-style-type: none"><li>• Designed and shipped core features of the low-code platform directly contributing to a sustained growth of 20% ARR</li><li>• Scaled the platform and led performance investigations across the stack — profiling, query optimization, and caching — for a growing multi-tenant customer base</li><li>• Worked directly with customer-facing teams to turn escalations into durable fixes and product improvements</li></ul> |                       |
|            | <b><u>Seed Labs — Karachi</u></b><br>Senior Software Engineer                                                                                                                                                                                                                                                                                                                                                                                                       | Oct '21 – Aug '22     |
|            | <ul style="list-style-type: none"><li>• Engineered a fault-tolerant, in-memory limit order book handling 100K TPS with zero data loss during node failures</li><li>• Contributed to the backend systems: order-matching engine and blockchain settlement engine</li><li>• Led migration to Kubernetes, significantly reducing fixed infrastructure costs while improving scalability</li></ul>                                                                      |                       |
|            | <b><u>Folio3 Software — Karachi</u></b><br>Senior Software Engineer                                                                                                                                                                                                                                                                                                                                                                                                 | Nov '19 – Sep '21     |
|            | <ul style="list-style-type: none"><li>• Led development of ERP customizations and e-commerce integrations (NetSuite SuiteCloud, SuiteScript, React) for Fortune 500 clients</li><li>• Created an internal knowledge base of ERP design patterns that measurably cut delivery time for routine projects</li></ul>                                                                                                                                                    |                       |
|            | <b><u>Involve Technologies — Karachi</u></b><br>Senior Software Engineer                                                                                                                                                                                                                                                                                                                                                                                            | Jul '19 – Nov '19     |
|            | <ul style="list-style-type: none"><li>• Built hybrid-cloud middleware integrating OpenStack with public clouds; developed monitoring pipelines (Elasticsearch, Graphite, Grafana)</li></ul>                                                                                                                                                                                                                                                                         |                       |
